Supervised Industrial Training SIT (Role-Based Web Portal)

Abdul Rehman Yaqoob, Muhammad Haris Hayat, Muhammad Waleed

Supervisor
Mr. Usman Ahmed

The SIT (Supervised Industrial Training) web-based portal is a digital platform that was made to make SIT program easier and better. It replaces the manual SIT process with in a single platform. It fixes the major problems that uses old methods that included email all over the place, deal with paper work, too much spreadsheets for data saving and not have in real time. These problems make it difficult for admin work, gaps in communication and make issue for students also. It is a single point of contact for all actors or users linked to SIT which includes Students, Academic Supervisors, Industrial Supervisors, Company Focal Person, Manager Placement, University Focal Persons, Evaluation Panel Members and Admin of system. It controls all SIT process which includes registering students and manage their profiles, helping them find and apply for SIT opportunities (only 2 application per cycle), matching companies with academic supervisor automatically, track progress, submitting evaluation every month by industrial supervisor, uploading documents such as acceptance and completion letter, provide communication between actors and final grading by evaluation panel. The MERN stack which includes MongoDB, Express.js, React.js (TypeScript + JavaScript extension) and Node.js is used to built this platform. It focuses on security, scalability and easy to use. It uses current tools for frontend such as Vite, Shadcn/ui React Hook form with Zod for validation and TanStack Query for easily data fetching. The system frontend role-based dashboards, guided workflows and a single communication hub to make it easier to use and take some workload reduced. The model used to built the system is iterative model that focuses on each actor repeatedly. It included feedback from stakeholder, a detailed analysis of 24 functional requirements and 8 non functional requirements and modeling through Use Cases, Activity Diagrams, Sequence Diagrams and Entity Relationship Diagram for all actors. The platform does not include managing financial transactions or video calls. It focuses on workflows, data security and ease of access for its users. It ensures filling the gaps of communication between company staff and university faculty, data of each actor is secure with authentication and authorizing. It fills the research gap by providing a customized solution for mandatory SIT program, a fair allocation method based on CGPA and clear norms for working together between Academic and industry partners. In future, it may be combined with more career services, get a mobile app, AI based matching opportunities and better communication tools like chatbots. The SIT web-based portal makes it easier for university and industry persons to work together, makes it easier for system admin and improves the SIT experience for all types of actors.

Career Objectives

Aspiring Full Stack Developer seeking a challenging role to utilize my web development, database, and programming skills in creating efficient and modern applications while gaining professional experience and career growth.

Skill Highlights

MERN Stack Development (MongoDB, Express.js, React.js, Node.js), Frontend Development, Backend Development, JavaScript (Basic), HTML5, CSS3, PHP, React / React Native, REST API Integration, Database Management (MongoDB, MySQL), Tools (GitHub, Postmen).

Projects

2025-2026 – FYP – Supervised Industrial Training SIT (Role-Based Web Portal).

Cybersecurity Ciphers Web Application.

Banking Application.

Inventory Management System.

Language Translator App (Mobile Application).

Student Portal (Web Application).

Education

Bachelor of Information Engineering Technology – 2023-2027 – Foundation University, Islamabad.

Programming Skills

HTML, CSS, C++, C#, MySQL, React Native, Python, MERN Stack.

Career Objectives

Aspiring Mobile App Developer (Flutter) seeking a challenging role to utilize my cross-platform development, UI/UX design, and programming skills in building efficient and modern mobile applications while gaining professional experience and career growth.

Skill Highlights

Flutter App Development (Dart), UI/UX Design for Mobile Apps, State Management (Provider), REST API Integration, MERN Stack Development (MongoDB, Express.js, React.js, Node.js), Frontend Development, Backend Development, JavaScript (Basic), HTML5, CSS3, PHP, React / React Native, REST API Integration, Database Management (MongoDB, MySQL), Tools (GitHub, Postmen, Android Studio, Vs Code).

Projects

2025-2026 – FYP – Supervised Industrial Training SIT (Role-Based Web Portal).

Cybersecurity Ciphers Web Application.

Online Bidding System.

E-Commerce App (Mobile Application).

Student Portal (Web Application).

Education

Bachelor of Information Engineering Technology – 2023-2027 – Foundation University, Islamabad.

Programming Skills

HTML, CSS, C++, C#, MySQL, Flutter (Dart), React Native, Python, MERN Stack.

Career Objectives

Motivated Software Engineering graduate with strong interest in Full Stack Development, skilled in building responsive web and mobile applications using modern frontend and backend technologies.

Skill Highlights

MERN Stack Development (MongoDB, Express.js, React.js, Node.js), Frontend Development, Backend Development, JavaScript (ES6+), HTML5, CSS3, React / React Native, REST API Integration, Database Management (MongoDB, MySQL).
